HIPAA Version 5010 Update for PAG/TAG

March 8, 2012

Agenda

Topic	Page #
Trading Partner Certification Status	Page 3
Dual Processing Reminder	Page 4
Acceptance of HIPAA Version 5010 Transactions	Page 5
HIPAA Version 835 Transactions	Page 6

Trading Partner Certification Status

- There are 115 trading partners who are not HIPAA Version 5010 certified for 837 transactions.

  o These trading partners have billed approximately $600 million to MaineCare and have submitted 39,000+ files since MIHMS go-live.

- Of the 114 trading partners, only 4 of the 28 "high priority" trading partners are not yet certified.

Dual Processing Reminder

- MaineCare will continue to accept HIPAA Version 4010 transactions until March 31, 2012. After March 31, 2012, any 4010 transaction will be rejected.

- If you are a trading partner that is unable to submit 5010 transactions after March 31, 2012, your claims submission will need to be via Direct Data Entry (DDE) or through paper claims.

Acceptance of 5010 Transactions

- MIHMS started accepting HIPAA version 5010 transactions on Friday, February 24.

- Since this time, MIHMS has processed:
  - 793 HIPAA Version 5010 837 files
  - 34 HIPAA Version 5010 835 files

- The first 5010 COBA file was received from CMS on March 1, 2012 and was processed on March 3, 2012

- Molina will continue to receive 4010 and 5010 COBA transactions until CMS no longer processes 4010 COBA transactions.

HIPAA Version 835 Transactions

- Since Go-live MIHMS has experienced the following issues with HIPAA Version 5010 835 transactions:

  o **TR5829** – QNXT data error messages that impacts some 835 transactions. This is a new issue with 4.8. There are two 835s that need to be resolved once the resolution for this TR is approved for production. Resolution of this TR is targeted for this week (3/9/2012).

  o Some large volume 835s could not be generated and a work around was developed. The root cause of the issue was identified, is being tested, and the fix is expected to be deployed this week (3/9/2012).

  o **TR5795** – 835s are occasionally are out of balance. This is a known issue since MIHMS go-live. There were three 835s that were out of balance which were manually resolved and new 835s will be generated this week. The root cause of the issue was identified, is being tested, and the fix is expected to be deployed this week (3/9/2012).

Summary

- Complete your HIPAA Version 5010 certification if you haven't done so already!

- If you have suggestions on ways to further trading partner certification testing, we welcome your feedback. Please send your suggestions to Matt Galletta at Matt.W.Galletta@maine.gov.
